

Tobacco Harm Reduction 101

Utah 2025

Lawmakers are often bombarded with misinformation on the products used by adults in their state. This annual analysis provides up-to-date data on the adults who use cigarettes and e-cigarette products in the Beehive State. This information also includes data on youth use, impacts of e-cigarettes and analyses of existing tobacco monies

Key Points:

- In 2023, 149,075 Utah adults (6 percent) were currently smoking. This is a 10.4 percent decrease from 2022 and represents 14,348 fewer adults smoking.
- Among all smoking adults in Utah in 2023, 8.6 percent were 18 to 24 years old, 39.4 percent were 25 to 44 years old, 34.7 percent were 45 to 64 years old, and 17.4 percent were 23.5 years or older.
- Among all adults earning \$25,000 or less in 2023, 18.2 percent were currently smoking compared to 3.4 percent of adults earning \$50,000 or more.
- Among all smoking adults in Utah in 2023, 61.9 percent were White, 21.3 percent were Hispanic, 5 percent were Multiracial, 3.5 percent were American Indian/Alaska Native, 3.4 percent were Asian, 2.9 percent were Black, and 2.1 percent were Native Hawaiian/Pacific Islander.
- In 2023, 166,467 Utah adults (6.7 percent) were currently using e-cigarettes. This is an 11.8 percent decrease from 2022 and represents 18,908 fewer adults vaping.
- Among all vaping adults in Utah in 2023, 28.7 percent were 18 to 24 years old, 55.2 percent were 25 to 44 years old, 14 percent were 45 to 64 years old and 2.1 percent were 65 years or older.
- In 2023, for every one Utah high school student who was smoking, more than 35 adults were currently using cigarettes.
- In 2023, for every one Utah high school student who was vaping, more than seven adults were currently using e-cigarettes.
- The introduction of e-cigarettes has not led to increases in cigarette smoking, but rather, correlates with significant declines in smoking rates among young adults.
- Between 2007 and 2023, smoking rates among Utah adults aged 18 to 24 years old decreased by 70 percent.
- E-cigarette use has decreased among Utah young adults. Between 2022 and 2023, e-cigarette use among 18- to 24-year-olds decreased by 29.9 percent.
- Cigarette excise taxes in Utah disproportionately impact low income and low education persons, while failing to significantly reduce smoking rates among that class.
- Among Utah adults earning \$25,000 or less, smoking increased on average by 2.3 percent annually between 2003 and 2023, while rates among adults earning \$50,000 or more decreased by 2.9 percent during the same period.
- In 2023, low-income adults were 2.3 times more likely to smoke than high income earners.
- In 2023, among Utah adults who did not graduate high school, 18.3 percent were currently smoking, while only 1.7 percent of college graduates were smoking.
- In 2023, adults lacking a high school diploma were 3.4 times more likely to smoke than college graduates.
- Utah woefully underfunds programs to prevent youth use of tobacco and/or vapor products and help adults quit smoking, while simultaneously receiving millions of dollars from the pockets of the adults who smoke. In 2023, for every \$1 the state received in tobacco monies, it spent only \$0.15 on tobacco control efforts.

Tobacco Harm Reduction 101

Utah 2025

Adult Combustible & E-Cigarette Use

In 2023, according to data from the annual Behavioral Risk Factor Surveillance System survey, conducted by the Centers for Disease Control and Prevention, an estimated 60,210 adults (or 11.3 percent of Utahns) were currently smoking. This is a 10.4 percent decrease from 2022 when 6.7 percent reported current cigarette use. There were 14,348 fewer adults smoking in 2023 compared to 2022.

In 2023 (among all Utah adults), 2.6 percent of 18- to 24-year-olds, 7.1 percent of 25–44-year-olds, 7 percent of 45–64-year-olds, and 5.1 percent of adults aged 65 years or older were currently smoking combustible cigarettes. Among all smoking adults in 2023, 8.6 percent were 18 to 24 years old, 39.4 percent were 25 to 44 years old, 34.7 percent were 45 to 64 years old, and 17.4 percent were 23.5 years or older.

Between 2022 and 2023, smoking rates among 18- to 24-year-olds decreased by 39.5 percent, among 25–44-year-olds by 17 percent, and among 45–64-year-olds by 10.3 percent. Smoking rates increased among adults aged 65 years or older by 59.4 percent.

Among all adults earning \$25,000 annually or less in 2023, 18.2 percent reported currently smoking, compared to 3.4 percent of adults who earned \$50,000 or more per year. Low-income adults were 2.3 times more likely to smoke.

In Utah, Black adults reported smoking at a greater percentage of their identified race at 15.4 percent. This is compared to 14.9 percent of American Indian/Alaska Native adults, 11.1 percent of Native Hawaiian/Pacific Islander adults, 10.4 percent of Multiracial adults, 8.5 percent of Hispanic adults, 7.6 percent of Asian adults, and 4.8 percent of White adults.

Yet, White adults made up a significantly larger percentage of Utah's total adult smoking population. In 2023, White adults accounted for 61.9 percent of the Beehive's state current smoking population, compared to Black adults, who made up 2.9 percent. Hispanic adults accounted for 21.3 percent, Multiracial adults made up 5 percent, American Indian/Alaska Native adults accounted for 3.5 percent, Asian adults made up 3.4 percent, and Native Hawaiian/Pacific Islander adults accounted for 2.1 percent of Utah's adult smoking population in 2023.

In 2023, an estimated 166,467 Utah adults (or 6.7 percent) were currently using e-cigarettes. This is an 11.8 percent decrease from 2022 when 7.6 percent reported current e-cigarette use. There were an estimated 18,908 fewer adults vaping in 2023 compared to 2022. There has been a 31.4 percent increase in adults vaping between 2016 and 2023. Further, there were an additional 58,196 Utah adults vaping in 2023 compared to 2016.

Among Utah adults currently using e-cigarettes in 2023, 28.7 percent were 18 to 24 years old, 55.2 percent were 25 to 44 years old, 14 percent were 45 to 64 years old and 2.1 percent were 65 years or older. Among adult e-cigarette users in Utah in 2023, 71.3 percent were 25 years or older.

Youth Combustible Cigarette and E-Cigarette Use

Youth smoking rates are at historic lows in the Beehive State. In 2023, 9.5 percent of high school students reported ever trying combustible cigarettes, while 1.1 percent reported currently smoking, or having used the product on at least one occasion in the 30 days prior. In 2023, approximately 4,169 Utah high school students were smoking, compared to an estimated 149,075 Utah adults aged 18 and over who were currently smoking. For every one high schooler student smoking in 2023 in Utah, more than 35 adults were currently smoking.

Youth vaping continues to decline in the Beehive State. In 2023, 19.6 percent of Utah high school students reported ever using an e-cigarette, and 5.7 percent reported current use. Between 2019 and 2023, ever-use of e-cigarettes decreased by 35.7 percent, while current use declined by 41.2 percent. In 2023, approximately 21,282 Utah high school students were vaping, compared to 166,467 Utah adults aged 18 and over who were currently vaping. For every one high schooler vaping in 2023 in Utah, more than seven adults were using e-cigarettes.

Utah 2025

Young Adult Smoking Rates
Utah

Young Adult Cigarette Use

The introduction of e-cigarettes has not led to increases in young adult cigarette smoking, but rather, correlates with significant declines.

E-cigarettes first entered the U.S. market in 2007, when 23.7 percent of 18- to 24-year-olds were currently smoking. Between 2007 and 2023, smoking rates among young adults in the Beehive State decreased by 70 percent. Comparatively, among all Utah adults, smoking rates decreased by 41.5 percent during the same period.

E-cigarette use has also declined among young Utah adults. In 2023, 11.5 percent of 18- to 24-year-olds were currently using e-cigarettes, which was a 29.9 percent decrease from 2022.

Given the epic lows in young adult smoking rates, lawmakers must refrain from policies that restrict access to alternatives to smoking.

Effects of Cigarette Excise Taxes

Utah currently imposes a \$1.70-per-pack state cigarette excise tax. Lawmakers often justify excise taxes on cigarettes to deter persons from using combustible cigarettes. These taxes not only disproportionately harm lower income and lower educated adults; the taxes also fail to significantly reduce smoking rates among those persons.

Among Utah adults earning \$25,000 or less, smoking rates increased on average by 2.3 percent annually between 2003 and 2023, while rates among adults earning \$50,000 or more decreased 2.9 percent during the same period. In 2023, low-income adults were 2.3 times more likely to smoke than high income earners.

Among Utahns who did not graduate high school, 18.3 percent were currently smoking in 2023, compared to 1.7 percent of college graduates who were smoking. In 2023, adults lacking a high school diploma were 3.4 times more likely to smoke than college graduates.

Lawmakers should refrain from enacting further increases in cigarette taxes given their disproportionate effect on low-income persons, while failing to reduce smoking rates.

Tobacco Monies

Each year, states receive billions of dollars borne out of the lungs of persons who smoke. This revenue includes excise cigarette taxes and settlement payments. Yet, each year, states spend miniscule amounts of tobacco-related monies on programs to help adults quit smoking and prevent youth use.

In 2023, the Beehive State collected \$70.6 million in state excise tax revenue from combustible cigarettes. This was a 5.2 percent decrease from 2022's \$74.5 million, or \$3.9 million less. Between 2003 and 2023, Utah collected more than \$1.5 billion in cigarette taxes.

Since the 2000s, Utah collected annual payments from tobacco manufacturers based on the percentage of cigarettes and tobacco products sold in the state in that year, after successfully suing manufacturers for smoking-related health care costs. Utah collected \$30.2 million in settlement payments in 2023, a 6.3 percent increase from 2022's \$28.4 million, or an additional \$1.8 million. Since 2003, the Beehive State collected more than \$717 million in tobacco settlement payments.

While Utah collected \$100.8 million in tobacco-related monies in 2023, the state allocated only \$15.5 million in state funding towards tobacco control programs, including cessation, education, and youth prevention efforts, which was 9.9 percent increase in funding from 2022's \$14.1 million, or an additional \$1.4 million. This amounts to 22 percent of taxes and 51 percent of settlement payments. In 2023, for every \$1 the state received in tobacco monies, it spent only \$0.15 on tobacco control efforts. Between 2003 and 2023, Utah collected more than \$2.3 billion tobacco monies, yet spent only \$174.3 million (or 7.6 percent) on tobacco control efforts during the same period.
